Ducati 750 F1
Cagiva Ala Azzurra: displacement 350/650 production from 1986/1987/1988
Cagiva Elefant: displacement 350/650/750 from 1986 to 1989

INSTRUCTIONS REPLACEMENT PICK-UP BOSCH WITH PICK-UP DUCATI ELETTRONICA (instructions will be found inside the box)
In order to restore the correct ignition phase:

1) Position the piston of the horizontal cylinder on the P.M.S. during the bursting phase, the flywheel will have 2 reference marks positioned at 90 ° with respect to each other.

2) Place the pick-ups with the appropriate adapter, supplied with the kit, on the original support bracket (see photo), matching the magnetic tip of the pick-up with the reference pins. The air gap between the sensor and the flywheel must be mm. 0.5 (possibly measured with an anti-magnetic feeler gauge at the highest point in the peripheral part of the flywheel).

3) Reposition the cable and mount the coupler, supplied in the kit, taking care to correctly position the 4 fastons in their housing, respecting the colors, as specific instructions (on the box)
